CPUHDG	Graphite	1kg
CPUHDP	Parchment	1kg

Please scan this QR for technical printing specifications, post-processing information (irrespective of whether you are using an ultrasonic or not) and to even order your first bottle!

"We were recently invited to try the Centri Print UHD graphite and parchment. The resin is comparable with other model resins of a much higher price bracket, overall a fantastic resin for the price. Easily a 10/10."

NANOVEST

Achieve amazing results with lithium disilicate using NanoVest, a versatile nitrogen filled investment. The fluid consistency makes it exceptionally easy to invest, with smooth surfaces and no bubbles. With virtually no reaction layer, NanoVest has become the investment of choice for users of pressable ceramics.

Code: 58NVI

Size: 100 x 100g + 2 x 946ml

The image shows three bags of NanoVes and a bottle of NanoVes solution. The bags are labeled 'NanoVes' and 'NANOVESE'. The bottle is labeled 'NanoVes' and 'NANOVESE'.

CENTRI™ TRAY

Disposable tray system with multiple retention points, making model creation fast and accurate.

Code	Description	Pack	Price
20TSF	Full arch	100pcs	£100.95
20TSQ	Quadrant tray	100pcs	£77.95

Scented synthetic pumice in a choice of grit, which is easy to use and adheres to the restoration while polishing.

Our **NEW** Inter Cure processing unit is made from plastic coated galvanised steel with a new heater that heats up quicker than ever and with a fully insulated tank will keep the water at a much higher ambient temperature, saving time and money as the machine reaches the processing parameters quicker. With a capacity of 6 x 3 flask compressors, the machine is capable of single or two stage processing. The digital display shows the relevant temperature feedback.

The image shows a large, white, rectangular industrial power supply unit, the Inter Cure 1000. It has a black top surface and a control panel on the front. The control panel includes a digital display, a power button, a reset button, a power switch, a power meter, and three indicator lights (red, yellow, green). The unit is labeled "intercure" and "1000" on the front panel. The manufacturer's logo "whw" is visible in the bottom right corner.

IEU BENCH TOP POLISHING UNIT

Constructed in galvanised steel with a white, tough plastic coating for added durability. The powerful dust extraction system is driven by two centrifugal fans (310 cfm each), which power the troughs independently. These troughs are manufactured in polypropylene and are fitted with a clear adjustable plastic visor.

All particles are extracted through our efficient pre and main filtration system, these are easy and cost effective to replace. The top of the unit is hinged and offers easy access to the filters and fluorescent lighting system.

For over 40 years, we have been making our own wax boilout and processing units. Constructed throughout in galvanised steel and with a tough plastic coating for ultimate durability. The top, tank and baskets are all made from heavy duty stainless steel. Up to **16** half flasks can be boiled out efficiently in a matter of minutes. Flasks are boiled out when water is sprayed over them by a rotating spinner, which is operated by the force of the water.

A manually operated hand spray is fitted as standard to both models.

A maximum of **24** flasks can be placed in the unit for processing; polymerisation is effected by the flasks being placed on a shelf above the water line. Processing occurs when water is sprayed on them, combined with the ambient temperature within the closed tank.

The efficient water filtration system means the water that is being sprayed is free from contaminants and is always clean. The insulated tank reduces temperature loss and because the water is recycled, the machine is very economical to run.

The Inter 5000 is programmable with a choice of 6 programs, giving the technician flexibility with both the temperature and processing time.

INTER 2000

The Inter 2000 has a pre-set temperature and manually operated timer.

A white Whw Inter 2000 ultrasonic cleaner. It has a stainless steel top with a black spray gun attached. The front panel features the Whw logo, a digital display, and several control buttons and switches. The text "inter 2000" is prominently displayed in red and black. Below it, there is a small red circular logo with the text "ultrasonic and heat seal". The unit is shown from a three-quarter view, highlighting its compact and professional design.

**£3497.95 and get 50kg of Centri™
Base HC powder FREE worth £563.95**

CENTRI™ BASE

Heat cure denture base material proudly made by WHW for over 40 years and produced to our own exacting standards, meeting the latest domestic compliances. Suitable for fast (20 minute) processing.

NITRADINE®

Most removable dental appliances are made from porous materials in which opportunistic and pathogenic microorganisms (fungi, bacteria and viruses) infiltrate, attach and form biofilm, a three-dimensional protective matrix in which they build-up. Candida albicans in particular deeply penetrates the pores and cracks of the dental appliance. Also other pathological microorganisms such as Pseudomonas aeruginosa, Streptococcus mutans, Staphylococcus aureus (inc. MRSA) and Herpes simplex can attach to and colonise the appliance which leads to painful irritation of the oral cavity (denture stomatitis). Elderly, diabetic, transplant and cancer therapy patients wearing contaminated appliances can develop serious systemic

infection of the upper airways. Clinical trials have shown that Nitradine® tablets result in a 99.995% bio-film reduction. Nitradine® contains no bleach and will not discolour retainers or aligners, in fact removing the Candida albicans and bacteria will restore the clarity of the device. Designed to be used once or twice a week alongside an existing hygiene routine.

DUST EXTRACTION DRAWER

Proudly made by WHW for over 30 years, the efficient dust drawer can be installed in most benches within a matter of minutes. A high powered 310 cfm, centrifugal fan with high and low speed settings will ensure that the laboratory is kept clean, whilst optimising the space available. The filtration system offers longevity and cost efficiency and we even produce a precious metal recovery filter. Where aesthetics are important, the drawer front can be replaced so that it integrates seamlessly into the laboratory.

COMING APRIL

CENTRI™ OXO-BIO SPECIMEN BAGS

We are proud to announce that we have developed a bio-degradable specimen bag that is also made from 30% recycled material.

This 6 x 9" clear bag with pocket will be supplied in packs of 1000 or 10000 and matches our ambition to bring cost effective but environmentally friendly solutions to the dental trader. Throughout 2023 we will be making more announcements about product launches that comply with this criteria.

All of our environmentally friendly solutions will carry the DLA Greener Dentistry Initiative kitemark to give all our patrons assurances that these standards are being met.

The DLA has developed a 'Green' standard called the 'Greener Dentistry Initiative'. The idea is that eventually all members of the dental team can be part of this initiative and it will identify environmental sustainability in UK dentistry, from prescription to manufacture, through to fit'

CENTRI™ RO

Cold cure radio-opaque acrylic with 10% barium for use with implant cases. Works effectively on CBCT scans and is easy to use. Centri™ RO can be bonded to our Cachet aligner/ retainer material to create a surgical guide if required.

Code	Size
01CTRO	150g

£45.75 and get a 500ml CC liquid for only £10

**CENTRI™ ISO+**

Centri™ iso+ creates a smooth layer on damp casts, absorbing quickly into the stone. It is thicker in consistency than the standard isolating type of separating mediums but thinner than traditional cold mould seals. This means it can be absorbed quickly into small spaces, ideal around plaster tooth margins. It provides a great barrier between plaster/die stone, heat or cold cured acrylics and will also form an effective barrier between stone and waxes. One quickly applied layer is all that is required. Suitable for use on plaster/die stone at all stages of the production process (including warm casts).

**STAND OUT FROM THE CROWD
with our complete logo design service**

First impressions count and often, your logo will be your clients first point of contact. You could be offering the most exclusive and superior product or service on the market but poor branding can give potential customers the wrong perception of what you have to offer. Whether you are a start-up or an established business, your clients are more aware than ever before about strong branding, so if yours doesn't match or exceed your competitors, you could risk being ignored. We approach logos and branding as part of our full-service offering to clients like you that need everything designed in one studio – from your initial logo design through to its application to printed and digital materials.

From £149.95

For further details and our pricing plans see our website.

ANEXSIL

Addition curing silicone (polyvinylsiloxane) suitable for scanning with optical/laser/tactile scanning systems. The material is multifunctional and adapts perfectly to all techniques. The long working time allows the perfect positioning with extreme ease, without incurring risks of pre-hardening. The shore hardness of 70 (red)/90 (blue) is reached in a short time, making it suitable for use with any moulding technique.

- Easy and clean mixing thanks to 1:1 dosage
- High viscosity and workability
- Long working time
- Scannable
- Suitable for moulding techniques
- High detail definition (40µm)
- Final hardness reached in short time
- High resistance to compression
- Compatible with self and heat curing acrylic resins
- Heat resistance over 120°C
- Millable
- High colour contrast
- High dimensional stability
