

**Our universally acclaimed Cachet range now has a new addition, the more durable Cachet Pro, please see below the science behind the sheet.**

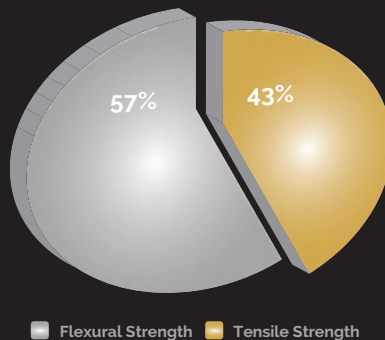

Available in either 0.75 or 1mm, Cachet Pro offers the perfect harmony of flexibility and hardness. This results in a material with the same handling characteristics as Cachet, a glass clear device for your customers and an even greater fracture resistance.

Cachet Pro is a homogeneous single-layered polyurethane sheet that consists of linear polymeric chains made of alternating flexible and rigid segments. It is a high-performance aligner and retainer material that provides excellent flexibility, strength, and durability, while also providing comfort for the wearer.

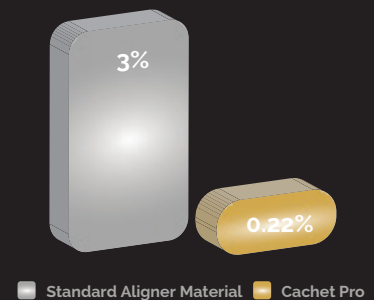

#### Elongation at Break

#### Optimal Balance of Rigidity and Elasticity

#### Formed Moisture Absorption

The unique make-up of this material makes it possible to have both mechanical and aesthetic properties such as cold-flexibility, wear & abrasion resistance, chemical & stain resistance and scratch & tear resistance.

The balance of rigidity and elasticity indicates that Cachet Pro is a virtually unbreakable aligner thermoforming foil and is nearly three times less likely to fracture than some standard aligner materials.

CODE	DESCRIPTION	PACK	SIZE	PRICE
80CAPRO070-120R	0.75mm	10pcs	120mmø	£23.95
80CAPRO070-125R	0.75mm	10pcs	125mmø	£23.95
80CAPRO100-120R	1.0mm	10pcs	120mmø	£25.95

# CENTRI™ OXO-BIO SPECIMEN BAGS

## A SOLUTION

We are proud to announce that we have developed a 6 x 9" clear pocket bag that will be supplied in packs of 1000 and matches our ambition to bring cost effective but environmentally friendly solutions to the dental trade. These bags share the same strength and characteristics of normal polythene bags.

## RECYCLABLE MATERIAL

Our bags not only contain the vital element that make them biodegradable but they are also made from 30% recycled material. This results in the bag being slightly opaque but this does not affect the performance. All of our bags carry the LDPE 4 logo and should be recyclable but please check this with your local authority.

## BIODEGRADABLE

The D2W logo shows that these bags are degradable when they come into contact with oxygen, they will start to break down and ultimately be a more responsible way of dealing with single use plastics. Many scientific studies do offer differing opinions on the use of D2W and we would encourage you to come to your own conclusions.

## THE INITIATIVE

The DLA has developed a 'Green' standard called the 'Greener Dentistry Initiative'. The idea is that eventually all members of the dental team can be part of this initiative and it will identify environmental sustainability in UK dentistry, from prescription to manufacture, through to fit.

## OUR BAGS

We appreciate that while a business wants to be conscientious, many of the greener alternatives carry a significant financial premium. We have incentivised our quantity break pricings to help reduce carbon emissions from multiple deliveries with prices ranging from £29.97 to £44.95 per 1000.

Pre-order now for delivery in April, samples are available upon request.
