Behind every smile

FUJIROCK EP

Used in the production of all kinds of dental prosthetics, Fujirock EP is specifically designed to produce consistently accurate models and dies, fully meeting the requirements of the modern dental laboratory.

Fujirock EP Premium is an improved stone for high-performance techniques and is also available in a range of different colours.

- ❖ Excellent physical properties
- ❖ Short mixing time (about 1 min), extended working time
- ❖ Short setting time
- ❖ Removable from cast after just 30 mins
- ❖ Highly fluid thixotropic properties allowing precise reproduction
- ❖ Low expansion (less than 0.08%)
- ❖ Immediate stability for a perfect fit with the prosthesis

OSTRON

Self-curing resin for custom trays.

A good restoration starts with a good impression. Ostron is GC's acrylic resin for the manufacturing of custom trays, base plates and bite-registration trays.

Code	Description	Size	RRP	Offer
GC10000135	Blue Transparent	1kg	£95.95	£81.56
GC10000134	Pink Transparent	1kg	£95.95	£81.56

METAL PRIMER Z

METAL PRIMER Z (the successor of METALPRIMER II) creates strong connections between metal frameworks and any type of resin-based material.

- ❖ A quick and easy procedure, without the need for any additional equipment
- ❖ No heat treatment required
- ❖ Creates a permanent bond even in a wet environment
- ❖ Can be applied directly in the mouth

Code	Size	RRP	Offer
GC10001265	5ml	£150.95	£128.31

EVERSTICK NET

Fibre-reinforcement that provides a strong, aesthetic and profitable solution for strengthening composites and acrylics.

It is made of silanated E-glass fibres embedded in a polymer matrix. This reinforcement can be used with light-cured, chemically-cured and dual-cured resins and composites, as well as with powder-liquid acrylics.

The everStickNET fibre adds strength and toughness to the material in two directions.

everStickNET is especially recommended for reinforcing crowns and thin areas of removable dentures.

But it can also be used for post and core crowns, veneers and clasp areas in removable dentures.

- ❖ Solution for a wide range of indications
- ❖ Compatible with most composites and acrylics
- ❖ Unique patented bonding
- ❖ Low starting investments
- ❖ Simple and time-saving fabrication method
- ❖ As strong as metal
- ❖ Metal free and aesthetic
- ❖ Easy to repair
- ❖ Extensive research data

Code	Size	RRP	Offer
GC10003403	30cm²	£199.95	£169.96

EVERSTICK C&B

Fibre-reinforced material to add strength to composite bridges.

This fibre reinforcement technology provides you with a metal-free, cost-effective treatment method to complement your prosthetic treatment choices.

everStickC&B enables you to create reversible fibre-reinforced bridges, by preserving healthy tooth structure for as long as clinically possible.

- ❖ Reliable and aesthetic way to replace missing teeth
- ❖ Perfect for providing an immediate solution for emergency situations such

as trauma cases, or after extractions

- ❖ In case of agenesis, perfect solution for the replacement of missing laterals before an implant can be placed
- ❖ Economical alternative in case the patient cannot afford conventional treatments
- ❖ Ideal for both anterior and posterior bridges
- ❖ Excellent bonding to composites thanks to the patented IPN structure

Code	Size	RRP	Offer
GC10003419	1x8cm	£74.95	£63.71
GC10003418	2x12cm	£204.95	£174.21

GRADIA PLUS

Modular composite system for indirect restorations that will meet all the demands on indications or techniques used from classic or multi-chromatic build-up to monolithic approach.

Gradia Plus is the new standard in lifelike mixing and layering of shades, developed in close cooperation with a group of top dental technicians.

Based on the latest ceramic polymer technology this advanced, high-strength, nano-hybrid, light-curing composite offers brightness, translucency, chroma and a natural opalescence in the oral environment that is similar to porcelain.

Its unique modular concept has fewer standard shades but uses a more individual mixing and layering approach making it more compact and cost-effective.

COE-SOFT

Powder and liquid soft relining material.

COE-SOFT is a resilient, self-curing reline material that is used when the patient requires a soft reline in upper or lower dentures. COE-SOFT polymerises in or out of the mouth in approximately 15 minutes.

Code	Description	Size	RRP	Offer
GC10001723	Intro pack with: Powder & Liquid & Lubricant + accessories	170g & 177ml & 18ml	£106.95	£90.91

TEMP PRINT

3D printable light curing composite for temporary crowns and bridges.

Temp PRINT is a biocompatible Class IIa material for temporary crowns and bridges, free of methyl methacrylate (MMA). It is designed to use for DLP-based 3D printing, has outstanding mechanical properties and remains stable, even after long-term storage.

Ideal to print temporary crowns, bridges, inlays, onlays and veneers and can easily be glazed and/ or characterised with OPTIGLAZE color.

The unique filler technology provides homogeneous dispersion of surface coated silica fillers which contribute to a superior wear resistance. Temp PRINT temporary restorations resist abrasion in the oral environment easily, making this product ideal for long-term provisional crowns and bridges.

Dynamic Controlled Rheology (DCR) is the anti-sedimentation additive in Temp PRINT. These anti-sedimentation additives form a shell around the pigments and with silica-fillers, prevent separation of the resin. This ensures the highest precision and material stability of Temp PRINT.

Code	Description	Size	RRP	Offer

GC10004797	Medium	500g	£209.95	£157.46

PATTERN RESIN LS

Long-term proven material for a wide range of laboratory and chair-side indications.

In addition to all conventional indications for modelling resins, PATTERN RESIN LS provides superior results in the following applications: custom attachments, conical and telescopic crowns, implant suprastructures, implant transfer techniques, crown & bridge techniques, inlays and onlays, partial dentures and electroforming technique.

The thixotropy of the resin results in excellent flow behaviour and handling properties, its high wettability allows easy mixing and application.

- ❖ Minimal shrinkage and easy-to-trim for perfect adaptation and reproduction

- ❖ High hardness and strength
- ❖ High stability even for thin layers
- ❖ Burns out without residue resulting in very clean casting surfacescedure, without the need for any additional equipment

OPTIGLAZE COLOR

Light-cured staining and characterisation solution for indirect restorations.

OPTIGLAZE color adds surface gloss and high wear resistance to all your restorations. Ready to use, easy to handle and the polishing stage will save you valuable time.

Choose from a wide variety of colours, both for internal and external characterisation, leading to

perfect aesthetics on all appliances including prosthetic restorations.

The renowned nano-filler technology gives your restoration high wear resistance, for long-lasting gloss with a high discolouration resistance.

LABOLIGHT DUO

LED dual-mode light curing unit for indirect composite techniques.

Now offering a state-of-the-art multi-functional light curing device for the technician, combining 2 curing modes; pre-curing (step mode) and final curing (full mode).

The double wave length LED technology ensures optimal hardening of all light cured dental materials, while the high power outlet reduces light curing cycles.

The award winning sleek, contemporary styling with smooth surfaces allows for easy cleaning and reduces the space it takes in your lab.

The Labolight DUO can be used to cure any of GC's composites in a secure and durable way. It offers a wavelength range of 380nm – 510nm with spectrum range peaks of 465nm – 485nm (12 Blue LEDs) and 390nm – 400nm (3 Violet LEDs).

The interface is very simple and intuitive and the inner parts are

easily accessible thanks to the wide opening. The reflective plate and the automated rotary system distribute the light efficiently.

FUJIVEST PREMIUM

Carbon-free phosphate bonded investment for crowns and bridges, suitable for all types of dental alloys, particularly non-precious alloys.

Whether heated up quickly or conventionally, with or without a casting ring, the reliable expansion control of GC Fujivest Premium produces consistently precise casting results.

❖ Offers a wide expansion range of up to 3.5% - implant suprastructures with non-precious alloys are now safe and straightforward

❖ Accommodates ringless techniques in both quick and slow-heating procedures

❖ Highly accurate fit due to easy liquid solution for optimal expansion control

❖ High fluidity and smooth consistency
❖ Robust investment but easy devesting

INITIAL LISI BLOCK

Fully crystallised lithium disilicate block that delivers optimal physical and aesthetic properties without firing. This unique block features GC's proprietary High Density Micronisation (HDM) technology for CAD/CAM dentistry to deliver high wear resistance, smooth margins and aesthetic final results.

The unique ultrafine crystal makes it easy to grind and can be quickly milled in its fully crystallised stage. Thanks to Initial LiSi Block's exceptional properties, high gloss and natural opalescence can be obtained in a few minutes by polishing only, the restoration is then ready for luting.

Initial LiSi Block is available in four aesthetic shades and two translucencies. When more characterisation is required, the Initial ceramic line comprises fully synergistic aesthetic solutions.

Indications:

- ❖ Veneers
- ❖ Crowns
- ❖ Inlays
- ❖ Onlays
- ❖ Partial crowns
- ❖ Crown or splinted crown on top of an implant abutment

Initial LiSi Block offers reduced process time: no need to fire because it is fully crystallised. This results in saving 40%* of the time required to create your restorations (*under testing conditions based on IFU).

Optimised acid and wear resistance helps preserve the aesthetic of your restoration over time. With excellent edge stability which contributes to a restoration with smooth margins.

Available in both high and low translucencies, Initial LiSi Block offers a natural opalescence in any light.

Superior gloss is achieved with simple polishing, while impressive 3D effects can be achieved with Initial Lustre Pastes ONE. Additional deeper characterisation is gained with Initial Spectrum Stains.

INITIAL IQ ONE SQIN

Paintable colour-and-form ceramic concept for the aesthetic realisation of monolithic or minimal buccally (micro-layering) reduced dental frameworks made of zirconium dioxide or lithium disilicate. It allows you to quickly and easily achieve highly aesthetic results, comparable to conventionally layered restorations but with a significant time gain. Can be used both posteriorly and anteriorly.

- ❖ Refined mixture of feldspar-based glass, perfectly balanced for the micro-layering technique
- ❖ Unique application and modelling properties
- ❖ Aesthetic contour type of ceramic with self-glazing properties
- ❖ Easy form and texture creation
- ❖ 3D aesthetics

The SQIN ceramic can be applied in a layer thickness of 0.1–0.5mm over the pre-painted and fired Lustre Paste ONE surface.

Thanks to the refined mixture of feldspar-based glass, a lifelike three-dimensional effect is created, bringing colour deepness

and lifelike translucency to your restorations.

In combination with the dedicated Form & Texture Liquid, it offers unique application and modelling properties allowing individual surface texture.

Furthermore, the mixture of Form & Texture liquid and the SQIN powders results in a highly compact and dense ceramic slurry with self-glazing properties after ceramic firing.

GC10006991	V-Shades set with: Neutral L-N, Neutral Fluo L-NFL & Value L-V & Opal L-OP & L-A, L-B, L-C, L-D & L-1, L-2, L-3, L-4, L-5, L-6, L-7, L-8, L-9, L-10 & Diluting Liquid & Refresh Liquid + accessories	10 x 3g & 15 x 10g & 2 x 25ml & 12 x 4g & 2 x 8ml	£1.057.95	£793.46

INITIAL IQ LUSTRE PASTES ONE

The most versatile paintable ceramic for external staining as well as internal characterisation of substructures.

Initial IQ Lustre Pastes ONE are feldspar-based ceramic materials, available in a ready-to-use consistency. Composed of fine ceramic particles, the three-dimensional paint pastes add colour deepness and lifelike translucency to your monolithic restorations. They can be applied in a thicker layer, guaranteeing unsurpassed vitality and a very natural glaze.

With the Lustre Pastes ONE V-Shades & Lustre Pastes NF Gum Shades (sold separately), you can easily improve or modify your conventional ceramic crown and bridge work (CTE between 6.9 and 13.3).

GC Initial Lustre Pastes ONE - V-shades to change the brightness, colour and value of all ceramics. To be used in the cut-back technique with your pressed or layered work and all your monolithic zirconium oxide works.

- ❖ 6 basic colours to achieve a V-shade restoration in the easiest way
- ❖ 12 advanced colours to unleash your inner artist and paint white spots, decalcifications, hair lines and crack lines
- ❖ All shades with optimised fluorescence throughout different levels
- ❖ The Lustre Pastes ONE are specially developed to give your monolithic restorations a natural fluorescent appearance, the fluorescence can be

boosted with Lustre Neutral FLUO (L-NFL)

- ❖ The mix of refined glass ceramic particles ensure lifelike depth light dynamics for a natural 3D effect
- ❖ Improved and unique paste with a fine thixotropic consistency enabling an easier and more precise application
- ❖ Ready to use, adaptable to your preferred consistency
- ❖ Optimal fluorescence ensuring the look of natural teeth under all light circumstances

STAFF PICKS
ISH AYA

- ❖ Perfect in combination with Initial IQ SQIN for the full ceramic micro-layering technique
- ❖ Can be used as colour & individualisation layer assuring a perfect connection firing before application of the Initial IQ SQIN in the micro-layering technique
- ❖ Internal & external use
- ❖ Individualisation possibilities can be increased with the GC Initial Spectrum Stains (powder stains)

INITIAL SPECTRUM STAINS

Universal stains & glaze for the individualised staining and characterisation of ceramic materials.

With Initial Spectrum Stains, GC offers a pallet of universal stains and glaze to be used for the individualised staining and internal as well as external characterisation of ceramic materials.

Being compatible with a wide CTE range, the Initial Spectrum Stains are perfectly adapted to fit nearly all types of dental ceramics.

The Initial IQ ONE SQIN system - the paintable colour-and-form ceramic system - you can quickly and easily achieve high aesthetic results, comparable to conventionally layered restorations but with a significant time gain.

Code	Description	Size	RRP	Offer
GC10003190	Stain set with; SPS1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16 & GL & Glaze Liquid & Glaze Paste Liquid + accessory	16 x 3g & 1 x 10g & 1 x 25ml & 1 x 8ml	£692.95	£519.71

The Initial Spectrum Stains can be mixed with Lustre Pastes ONE or SQIN to give an infinite amount of bespoke colour options.

INITIAL INMETALBOND

INmetalbond is used as a thin layer between the alloy and the first opaque layer.

The INmetalbond blocks the escaping metal oxides and neutralizes differences in the expansion coefficient. The bonder does not increase the bonding strength as such but allows a wider span of CTE compatibility.

- ❖ Easy to apply
- ❖ Ready-to-use paste
- ❖ Neutralises differences in the expansion coefficient between Initial metal ceramics and dental alloys
- ❖ Improves and secures the chemical bond on various types of alloys
- ❖ Allows a wider span of CTE compatibility

INITIAL LISI PRESS

The first lithium disilicate ceramic ingot with High Density Micronization (HDM), a technology unique to GC that provides unsurpassed physical properties and the most natural, lifelike aesthetics of any pressed ceramic option on the market today.

The result is the ultimate combination of strength and aesthetics, making Initial LiSi Press perfectly suitable for all types of restorations through all levels of transparency.

- ❖ Unsurpassed flexural strength
- ❖ Unparalleled aesthetics:
 - Richer, warmer, brighter colour with excellent fluorescence
 - Predictable material and colour stability after repeated firings
 - Optimised for use Initial LiSi veneering ceramic and Initial Lustre Pastes NF
- ❖ Real time savings
- ❖ Almost no reaction layer when devested - cleaner presses
- ❖ Easy layer removal with glass bead blasting - no hydrofluoric acid

- ❖ Lower solubility than other leading brands - permanent gloss
- ❖ Antagonist friendly and wear resistant

Indications:

- ❖ Occlusal veneers
- ❖ Thin veneers
- ❖ Veneers
- ❖ Inlays
- ❖ Onlays
- ❖ Crowns in the anterior and posterior region
- ❖ 3-unit bridges in the anterior region
- ❖ 3-unit bridges in the premolar region up to the second premolar as most lateral unit
- ❖ Crown or splinted crown on top of an implant abutment
- ❖ 3-unit bridges up to the second premolar placed on top of an implant abutment

G-CEM ONE

New self-adhesive resin cement from GC simplifies all cementation procedures. G-CEM ONE brings together high bond strength, effortless clean-up and long-lasting esthetics as well as an excellent self-curing ability for a wide range of indications in ONE product solution.

G-CEM ONE is a truly universal, non-technique sensitive, versatile and reliable product that gives the flexibility of being effective in all cementation procedures for any type of restorations; from metal-based to resin and all-ceramic inlays, onlays, crowns, bridges, and posts. It demonstrates excellent bond strength to enamel, dentin and all indirect restorations.

In addition, the optional Adhesive Enhancing Primer (AEP) and its innovative GC Touch Cure feature provides optimal bond strength in challenging clinical situations, such as low retentive surfaces. The chemical initiator in the AEP accelerates the chemical cure of the cement to ensure optimal bonding. The AEP is easy to apply; no additional light-curing is needed – apply and air-dry.

- ❖ Cementation of all types of all ceramic, resin and metal-based inlays, onlays, crowns and bridges
- ❖ Cementation of metal, ceramic, fibre posts, and cast posts and cores
- ❖ Cementation of all ceramic and composite veneers
- ❖ Final cementation of crowns and bridges on implant abutments
- ❖ Excellent bond strength to enamel, dentin and to all indirect materials
- ❖ Reduced inventory and optimised workflow
- ❖ 4 stable shades: A2, Translucent, AO3, White Opaque

UNIFAST III

Self-curing acrylic resin for temporary inlays, crowns, bridges & repairs.

UNIFAST III introduces the SURF Technology (Surface Uniformity Revolutionary Fixation

Technology), a revolutionary polymer processing technology where polymer particles are coated with pigment and guarantee bubble-free, long-lasting and even-coloured mixtures.

Handling, physical properties and incredible aesthetics can be achieved independently or with OPTIGLAZE color.

- ❖ Temporary crowns, bridges and inlays
- ❖ Implant bridges and closing of implant screw holes
- ❖ Dentures with attachments or repairs
- ❖ Gingiva reproduction
- ❖ Superior handling for brush-on & pouring technique

- ❖ Perfect balanced composition for long-term temporaries
- ❖ Shade range to meet the highest demands

INLAY WAX STICKS

Inlay wax sticks that are available as medium or soft and in three different colours.

Chip resistant even in thin sections, these wax sticks have excellent plasticity and flow easily, allowing wax ups to be completed with ease.

- ❖ Will not discolour, even after prolonged use
- ❖ When soft, the wax is malleable and easy to adapt
- ❖ Easy to carve
- ❖ Minimal shrinkage, resulting in accurate restorations
- ❖ Easy to remove from the model without deformation

Code	Description	Size	RRP	Offer

MULTI-SEP

Advanced separator with a plethora of uses: wax to plaster, plaster to plaster, composite to plaster and resin to resin.

- ❖ Absorbs cleanly with no film or residue
- ❖ Incredibly accurate, does not affect fits
- ❖ Oil free
- ❖ Residue free
- ❖ Precise application and separation

BARBECUE SHOWCASE

Our BBQ showcases sponsored by GC, start in Sussex in the coming months, with more dates and nationwide locations to be announced very soon. Be the first to experience a unique approach to both barbecuing and dentistry, with a fully accredited Weber Barbecue Classics course.

During the day you will also get to experience the very best products from WHW and GC, featuring hands on demonstrations and technical troubleshooting. All in addition to preparing and cooking up to seven different courses in the state of the art indoor/outdoor cooking facilities.

Perfect for anyone looking to learn the Weber way of cooking, this introductory course will teach you how to achieve consistently great results with classic barbecue dishes. You will learn must-have barbecue skills, such as lighting, controlling temperature and how to tell when your food is cooked to perfection.

Using Weber's lid-on technique on both charcoal and gas barbecues, an expert chef will spend four hours teaching you the best way to cook a number of all-time barbecue classics.

As part of this course you'll be asked to prepare your own juicy black bun burger and be taught how to cut and portion a whole chicken, using the various pieces to create a succulent barbecued chicken dish. The chef will also show just one of the many possibilities to expand your barbecue menu with a demonstration of the famous "beer chicken."

Location: Kent Cookery School, Mersham-le-Hatch Business Village, Hythe Rd, Ashford TN25 6NH

Duration: 4-5 hours

Dates: 24 June 2023, 29 July 2023

Price: Only **£75** per person

EXAMPLE MENU:

1. Welcome:
Perfect Sausages
- Grill 'n smoke

2. Starter:
Barbecued chicken marinated in lemon, garlic and oyster sauce

3. Main Course:
Seared sesame salmon skewers with pickled cucumber spinach dip

4. Main Course:
Barbecued corn

5. Main Course:
Black bun burger with bacon jam

6. Main Course:
Tarragon beer chicken

7. Dessert:
Sweet pizza

Valid from April 3 - June 30 2023
