INNOVATION, CREATIVITY, AND SUSTAINABILITY - CHOOSE NECTAR!

Nectar is an environmentally friendlier, high-precision 3D print resin suitable for all dental models. This resin is crafted from sustainable sources and offers not only an eco-friendly alternative to traditional resins but also a versatile solution designed to meet all your dental requirements.

Nectar's unique formulation delivers exceptional detail and durability while significantly reducing the environmental impact compared to conventional petroleum-based resins. Additive technology aims to minimise waste in dental manufacturing, by choosing Nectar, you're contributing to a more sustainable future.

Q: Why should I switch my model resin to Nectar?

A: Nectar is a high-precision, durable, plant-based dental model resin. It allows any customer who adopts it to significantly reduce their environmental impact without sacrificing the quality of their prints or the cost per print of their models. Nectar offers exceptional value for money, so you are not paying a premium for the greener option.

Q: Will this work with my printer?

A: Nectar can be used on any printer that cures at 405 nanometres, provided the printer allows you to add custom resin profiles or the material has been validated by the printer's manufacturer. Our support team will be happy to help all users of the Nectar community. Please feel free to call us on 0800 0092 444.

Q: Do I need to change my printing/post-processing strategy to print with Nectar?

A: One consequence of the reduced plasticisers in Nectar is that the resin is marginally softer in its green state before being cured. We therefore recommend a minimum wall thickness of 3.5mm. Additionally, due to Nectar's increased density, some detergents may take a few minutes longer to remove the residual resin. However, when used in conjunction with Centri™ Print Wash, you can be done in 10 minutes.
