

SHINY NEW THINGS

MARATHON MULTI 800S MICROMOTOR

The Marathon Multi 800S is specifically crafted for dental professionals who prioritise precision and efficiency in their work. It boasts a digital speed display that allows for easy monitoring, ensuring that users can keep track of their performance effortlessly.

The design minimises noise and vibration, enhancing comfort during prolonged use. Additionally, it features a self-diagnosis function that provides instant feedback on performance, which can be invaluable for maintaining optimal operation. With variable speed control, users can make tailored adjustments to suit their specific needs.

The device offers high torque and a wide speed range, making it suitable for a variety of applications. Its compact and lightweight design further enhances its portability and ease of storage.

Overall, the Marathon Multi 800S merges innovation with practicality, making it an essential tool in every dental laboratory.

TCS® Unbreakable™ Disc

TCS Unbreakable™ milling discs are specifically designed for producing flexible partial dentures. These discs are crafted from an incredibly strong nylon thermoplastic, allowing for aesthetically pleasing restorations that closely mimic the natural appearance of gums and teeth. The material stands out due to its bond to the teeth, making it markedly different from its peers.

The Unbreakable™ milling disc has unbeatable strength and flexibility, which makes it highly durable lightweight and aesthetic in appearance. This material's inherent flexibility is another significant advantage, as it allows for comfortable, lightweight, and durable partial dentures that adapt well to the patient's oral environment.

Use in conjunction with either milled teeth in PMMA or zirconia as your perfect functional partner.

TCS® iFlex™ Disc

TCS iFlex™ milling discs are specifically designed for producing flexible partial dentures. These discs are crafted from a highly translucent polyolefin thermoplastic, allowing for aesthetically pleasing restorations that closely mimic the natural appearance of gums and teeth. The material stands out due to its bond to the teeth, making it markedly different from its peers.

The iFlex™ milling disc is easy to finish and polish, ensuring a smooth, high-quality surface that enhances both function and appearance. This material's inherent flexibility is another significant advantage, as it allows for comfortable, lightweight, and durable partial dentures that adapt well to the patient's oral environment.

Additionally, iFlex™ is resistant to stains and easy to maintain, making it an ideal choice for patients seeking long-lasting denture that requires minimal upkeep.

Use in conjunction with either milled teeth in PMMA or zirconia as your perfect functional partner.

PANAVIA™ SA Cement

PANAVIA™ SA Cement Universal is a forerunner in self-adhesive resin cements containing the unique LCSi monomer that adheres to virtually every material including glass ceramics without the need for a separate primer. Using a unique silane coupling agent built into the paste – LCSi monomer – the cement delivers a strong, durable chemical bond to porcelain, lithium disilicate and composite resin. The original MDP monomer present in the paste too allows for chemical reactivity with zirconia, dentine and enamel.

Building on the success of our PANAVIA™ SA Cement Plus, PANAVIA™ SA Cement Universal also offers the same wide range of indications for adhesion and is suitable for crowns/bridges, inlays/onlays, posts, and even adhesion bridges. Thanks to its powerful single-step bonding formula, cementation is easier than ever before. Supplied in an 8.2g cartridge with mixing tips.

BUY ANY PANAVIA™ FOR AN **INTRODUCTORY PRICE** OF £109.95 AND GET A **KATANA CLEANER** WORTH **£44.95 FREE**

KATANA™ Cleaner

KATANA™ Cleaner is the easiest and best way to clean up contamination and improve bond strength.

When cementing a restoration during trial fitting, the bond strength is reduced due to contamination with saliva and blood in the oral cavity. KATANA™ Cleaner has a high cleaning effect due to the surface active characteristic of MDP Salt. In contrast to other cleaners, KATANA™ Cleaner has a pH value of 4.51 which allows usage not only extra-orally but also intra-orally. It is easy to restore the original bond strength for your cementations.

KATANA™ Cleaner is an all-purpose universal cleaner for tooth structure and prosthetics.

Centri™ Print Nectar™

Nectar™ is an environmentally friendlier, high-precision 3D print resin suitable for all dental models. This resin is crafted from sustainable sources and offers not only an eco-friendly alternative to traditional resins but also a versatile solution designed to meet all your dental requirements.

Nectar™'s unique formulation delivers exceptional detail and durability while significantly reducing the environmental impact compared to conventional petroleum-based resins. Additive technology aims to minimise waste in dental manufacturing, by choosing Nectar™, you're contributing to a more sustainable future.

Q: Why should I switch my model resin to Nectar™?

A: Nectar™ is a high-precision, durable, plant-based dental model resin. It allows any customer who adopts it to significantly reduce their environmental impact without sacrificing the quality of their prints or the cost per print of their models. Nectar™ offers exceptional value for money, so you are not paying a premium for the greener option.

Q: Will this work with my printer?

A: Nectar™ can be used on any printer that cures at 405 nanometres, provided the printer allows you to add custom resin profiles or the material has been

validated by the printer's manufacturer. Our support team will be happy to help all users of the Nectar™ community. Please feel free to call us on 0800 0092 444.

Q: Do I need to change my printing/post-processing strategy to print with Nectar™?

A: One consequence of the reduced plasticisers in Nectar™ is that the resin is marginally softer in its green state before being cured. We therefore recommend a minimum wall thickness of 3.5mm. Additionally, due to Nectar™'s increased density, some detergents may take a few minutes longer to remove the residual resin. However, when used in conjunction with Centri™ Print Wash, you can be done in 10 minutes.

REPAIR CENTRE

Does your printer have a problem? Our team of engineers will be able to diagnose and fix your issues, whether it be hardware or software based. You will be safe in the knowledge that all of our repairs are undertaken by qualified staff and will carry our quality guarantee. We will be offering an introductory discount of 20% off all parts and labour on Asiga repairs during the month of February.

ASIGA SERVICE CENTRE

Just box up your machine and we will sort out the rest. Your price includes an insured shipping service to and from your laboratory, pick your dates in advance to avoid unnecessary downtime and no hidden costs.

Our new, hassle-free fixed price service agreements, now help you extend the life of your Asiga printer. All of our work is guaranteed and undertaken by skilled, experienced and qualified engineers.

As well as servicing your machine we will also do our 30 point health check to make you aware of the condition of your printer.

To launch this one of a kind service we are offering your first service at a special introductory price.

FINANCE

We will now be offering innovative finance solutions that can be tailored to both your budget and circumstances. Whether you want to lease or purchase the equipment, and over timescales to suit, we will be able to help.

Please speak to our team of experts, they will provide all the information you need to help you make the right decision, and in many instances, we can get an offer in minutes.*
