Ceramill Motion Air

Compact. Powerful. Effortlessly Precise

The **Ceramill Motion Air** from Amann Girrbach brings industrial-grade 5-axis milling technology into a compact, user-friendly format. Designed for dental laboratories and chairside environments alike, it delivers high-precision dry milling with exceptional reliability, efficiency and ease of use.

Whether you are expanding your in-house capabilities or upgrading existing CAD/CAM workflows, the Ceramill Motion Air offers the perfect balance of performance, flexibility and value.

Advanced 5-Axis Performance

At the heart of the Ceramill Motion Air is proven 5-axis simultaneous milling technology. This enables the production of highly accurate, complex restorations with outstanding surface quality and minimal manual finishing.

The powerful 60,000 rpm spindle ensures precise and consistent milling results across a wide range of indications, including:

- ✓ Crowns and bridges
- ✓ Inlays and onlays
- ✓ Frameworks
- ✓ Implant restorations
- ✓ Surgical guides

Its dry milling capability supports materials such as zirconia, PMMA, composite, wax and PEEK, making it a versatile solution for everyday restorative production.

Designed for Modern Workflows

Compact yet robust, the Ceramill Motion Air has been engineered with space efficiency in mind. Its small footprint and integrated compressor mean no external air supply is required, allowing flexible installation within both laboratory and clinical settings.

A 10" touchscreen display provides intuitive, guided operation, while intelligent tool management and maintenance prompts help ensure smooth day-to-day performance. Even spindle replacement is designed to be quick and straightforward, minimising downtime and maximising productivity.

With its standard 98 mm C-clamp holder and optional block adapters, the unit offers flexible material handling to suit your preferred workflow.

Smart Connectivity & Control

Digital production doesn't stop at the machine. The Ceramill Motion Air integrates seamlessly into the Ceramill CAD/CAM workflow and can be monitored remotely via the Ceramill Go app, providing real-time updates on job progress and system status.

This level of connectivity gives technicians and clinicians greater oversight, improved scheduling and enhanced efficiency.

Built for Reliability & Efficiency

- ✓ 5-axis simultaneous dry milling
- ✓ High-performance 60,000 rpm spindle
- ✓ Integrated compressor and air management
- ✓ Compact footprint for easy installation
- ✓ User-friendly touchscreen interface
- ✓ Low maintenance design

The result is a dependable milling solution that combines advanced engineering with everyday practicality.

Why Choose Ceramill Motion Air from WHW?

At WHW, we don't just supply equipment - we support your full digital workflow. Our experienced team provides installation, training and ongoing technical support to ensure you get the very best from your Ceramill investment.

The Ceramill Motion Air is an ideal solution for practices and laboratories seeking to bring high-quality restorative production in-house, without compromising on precision or performance.
